SUMMARY

AI Engineer with 1 year and 6 months of experience building and deploying production-grade LLM systems and multimodal AI pipelines using Python, Kubernetes, and cloud services (AWS S3, GCP, Azure). Skilled at guiding adoption and onboarding of AI-driven microservices, architecting scalable data processing workflows with robust MLOps and CI/CD practices for enterprise customers.

SKILLS

- **AI & Generative AI:** OpenAI, RAG, FAISS, Pinecone, LangChain, LangGraph, LangFuse, Prompt Engineering, OpenAI Whisper, Multimodal AI, Github Copilot, Prompt Engineering.
- **Backend & APIs:** Python, Node.js, FastAPI, Django, Flask, REST APIs, Microservices
- **Cloud & DevOps:** Azure, AWS, GCP, Docker, CI/CD, MLOps, Kubernetes, S3, Kubeflow
- **Machine Learning & Data:** Scikit-learn, NLP, Embeddings, Model Evaluation, TF-IDF, Word2Vec
- **Frontend:** React, Next.js, TypeScript, Redux

EXPERIENCE

Stelmith

Jan 2025 – June 2026

AI Engineer

USA

- Built production-grade RAG pipelines using Python and OpenAI APIs and FAISS/Pinecone vector search, increasing user engagement by 35% and reducing content discovery time by 50%.
- Developed an Intelligent Document Processing (OCR+LLM) system using Azure Computer Vision (OCR) to extract structured data from handwritten images and PDFs, reducing manual form entry by 80%.
- Engineered a voice-to-structured-data automation pipeline using OpenAI Whisper integrating speech-to-text and LLM-based semantic parsing deployed using FastAPI to auto-populate enterprise workflows.
- Designed an LLM-assisted clinical decision support prototype using prompt tuning and retrieval grounding with structured output guardrails.
- Integrated Langfuse for production LLM observability and tracing monitoring tokens, API latency and model responses across GenAI applications.
- Structured scalable microservices-based AI architecture on AWS and GCP, leveraging Docker, Kubernetes, REST APIs, and S3 storage, enabling 10× higher concurrent user support while maintaining 99.95% uptime.
- Optimized AI model deployment and inference using Kubeflow pipelines, CI/CD automation, and vector databases, cutting response latency from 2.5s to 0.8s for real-time interactions.
- Implemented emerging GenAI technologies and tools, including LangGraph-based orchestration, agent workflows, and tool chaining, accelerating AI feature rollout by 50% and reducing development cycles from month to weeks.

PROJECTS

Multi-Source Retrieval Augmented Generation | <https://github.com/revanth122/multi-source-rag>

- Built an end-to-end Multi-Source RAG system using LangChain and FAISS to intelligently retrieve and rank heterogeneous context sources, improving LLM answer accuracy.
- Designed semantic chunking and embedding workflows on AWS S3 for unstructured text, transforming it into vector representations stored in Pinecone for efficient similarity retrieval.

Movie Review Rating System Using Machine Learning Models | <https://github.com/revanth122/Movie-Review-Rating>

- Developed a machine learning-based movie review rating system using NLP and sentiment analysis on IMDb datasets, achieving 85% accuracy in predicting user ratings.
- Implemented and optimized models (Logistic Regression, Naive Bayes, SVM) with Python, Scikit-learn, NLTK, and TF-IDF/Word2Vec, improving prediction performance by 20% compared to baseline models.

ROLEMATCH AI | <https://cover-letter-generator-amber.vercel.app/>

- Developed a website to parse resumes and extract technical skills using structured LLM outputs.
- Computes semantic similarity between the resume and job description by using embeddings and trained to reduce hallucinations.
- It will identify the matching skills and generate a match score for the given job description.

EDUCATION

University of North Texas, Denton, Texas, USA

Aug 2023- May 2025

Master of Science, Computer Science

- **GPA:** 3.63/4.0

Geethanjali College of Engineering, India

June 2018-May 2022

Bachelor of Technology, Computer Science Engineering.

CERTIFICATIONS

- Microsoft Python Development Course certificate from Coursera
- Machine Learning with Python
- Machine Learning with Apache Spark
